ANNUAL REPORT

OF

THE SECRETARY OF THE TREASURY,

01

THE STATE OF THE FINANCES.

DECEMBER 7, 1831.

Read, and laid upon the table.

TREASURY DEPARTMENT,

December 7, 1831.

Sir: I have the honor to transmit a report prepared in obedience to the "Act supplementary to the act to establish the Treasury Department.".

I have the honor to be,

With great respect,

Your obedient servant,

LOUIS M'LANE,
Secretary of the Treasury U. S.

To the Hon. the SPEAKER

Of the House of Representatives.

REPORT ON THE FINANCES.

In obedience to the directions of the "Act supplementary to the act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report.

I. OF THE PUBLIC REVENUE AND EXPENDITURES.

The receipts into the Freasury, from all sources, during the year 1829, were - - - \$24,827,627 38

The expenditures for the same year, including payments on account of the public debt, and including \$9,033 38 for awards under the first article of the treaty of Ghent, were

The expenditures for the fourth quarter, including \$6,205,810 21 on account of the public debt, are estimated, on data furnished by the respective Departments, at

\$9,807,422 28

Making the total estimated expenditures of the year

\$30,967,201 25

And leaving in the Treasury on the 1st of January, 1832, an estimated balance, including \$439,475 13 on account of the indemnity under the Danish convention, of

Which, however, includes the funds, estimated at \$1,400,000, heretofore

reported by this department as not effective.

The appropriations remaining unsatisfied at the close of the year are estimated at \$4,139,823 13; but, of this amount, it is estimated by the proper Departments-

1. That the sum of \$3,423,525 87, only, will be required for the objects

for which they were appropriated.

That the sum of \$501,102 78 will not be required, and may therefore be considered as an excess of appropriation, and is proposed to be applied, without being re-appropriated, in aid of the service of the year 1832, as will more fully appear when the estimates for the appropriations for that year are presented.

3. That the sum of \$215,194 48 will be carried to the surplus fund, either because the objects for which it was appropriated are completed, or because these moneys will not be required for, or will

be no longer applicable to, them.

II. OF THE PURITO DEBT

The payments on account of the public debt, during the first three quarters of the year, have amounted, as has been already stated, to -

\$9,983,479 46

Viz.

On account of principal \$8,891,049 97 And of interest 1,092,429 49

III. OF THE ESTIMATES OF THE PUBLIC REVENUE AND EXPENDITURES FOR THE YEAR 1832.

The great commercial activity prevailing in the United States has contributed not only to enlarge the revenue from customs for the present year beyond the estimates, but will probably carry that of the next year to a still higher amount.

The importations for the year ending on the 30th of September last are estimated at \$97,032,858, and the exports at \$80,372,566, of which \$62,048,233

were domestic, and \$18,324,333 foreign products.

Making the whole amount of the public debt of the U. S.

The duties which accrued during the first three quarters of the present year are estimated at \$27,319,000, and those for the fourth quarter at \$6,000,000; some deduction, however, will be made from these before they can reach the Treasury, on account of the reduction in the duties on coffee, tea, cocoa, and salt, by the acts of the 20th and 29th May, 1830, and which may be estimated to affect the duties on those articles remaining in store on the 1st of January, 1832, to the amount of about \$750,000.

The receipts from the public lands during the present year, it will be perceived, have likewise exceeded the estimates, and, indeed, have gone beyond all former example. It is believed that, notwithstanding the large amount of scrip and forfeited land stock that may still be absorbed in payments for lands, yet, if the surveys now projected be completed, the receipts from this source of revenue will not fall greatly below those of the present

From all the information which the Department has been able to obtain, the receipts into the Treasury during the year 1832 may be estimated at \$\ -\ \\$30,100,000 00

- \$14,019,548 21

Leaving for the principal in that year

Which, being applied to that object, will leave the total amount of the public debt at the close of the year 1832 \$10,302,686 97

The Government, however, has other means, which, if Congress see proper, may be applied towards the payment of the debt, viz. the shares in the Bank of the United States, amounting at par to \$7,000,000, but which, as will be presently explained, may be estimated at not less than

8,000,000 00

In that event, the amount of the debt on the 1st January, 1833, would be but

\$2,302,686 97

Which sum, together with a fair allowance for the cost of purchasing at the market price the stocks not redeemable in the course of the proposed operation, might be supplied in the months of January and February, 1833, by the application from the revenues of that year of a sum equal to 13 of the amount applied from the ordinary revenues to the debt in the year 1832, say

\$2,503,258 02

It may be further observed, that, should any diminution take place in the estimated revenue, or should the expenditure exceed the estimated amount, the deficiency which either event might produce in the means of the Treasury applicable to the debt, would be supplied by the amount reserved in this estimate for the unsatisfied balances of appropriations. For, although that sum constitutes a legal charge on the Treasury, to be met as occasion requires, yet, in any estimate of present means, it may be considered rather as a nominal than a real charge.

It will be thus perceived that the Government has the means, if properly employed, of reimbursing the whole of the public debt, by purchase or

otherwise, on or before the 3d of March, 1833.

The moral influence which such an example would necessarily produce throughout the world, in removing apprehension, and inspiring new confidence in our free institutions, cannot be questioned. Seventeen years ago, the country emerged from an expensive war, encumbered with a debt of more than one hundred and twenty-seven millions, and in a comparatively defenceless state. In this short period it has premptly repealed all the direct and internal taxes which were imposed during the war, relying mainly upon revenue derived from imports and sales of the public domain. From these sources, besides providing for the general expenditure, the frontier has been extensively fortified, the naval and maritime resources strengthened, and part of the debt of gratitude to the survivors of the revolutionary war discharged. We have, moreover, contributed a large share to the general improvement, added to the extent of the Union by the purchase of the valuable territory of Florida, and finally acquired the means of extinguishing the heavy debt incurred in sustaining the late war, and all that remained of the debt of the revolution.

The anxious hope with which the people have looked forward to this period, not less than the present state of the public mind, and the real interests of the community at large, recommend the prompt application of these means to that great object, if it can be done consistently with a pro-

per regard for other important considerations.

Of these means, as has already been shown, the shares owned by the Government in the Bank of the United States are an indispensable part; and for the reimbursement of the debt within the period contemplated, it will be necessary to effect a sale of them for a sum not less than eight millions of dollars.

The stock created by the United States for their subscription to the Bank having been actually paid previously to the 1st of July last, their interest in that institution has ceased to be nominal merely, and the shares form a part

of the fiscal resources applicable to the public demands.

The objects connected with the early reimbursement of the public debt are more important than the interest of the Government as a mere stockholder; and it is therefore respectfully recommended to Congress to authorize the sale of those shares for a sum not less than \$8,000,000.

A sale of so large an amount in the public market could not be expected to produce more than the par value, and, if attempted under circumstances calculated to shake public confidence in the stability of the institution, would, in all probability, prove wholly abortive. For these reasons, it is deemed advisable to effect a sale to the Bank itself—a measure believed to be practicable on terms satisfactory both to the United States and that institution.

In submitting this proposition to the wisdom of Congress, it is not intended that its adoption should be founded on any pledge for the renewal of the charter of the Bank. Considering, however, the connexion of the proposition with the Bank, and viewing the whole subject as a necessary part of the plans for the improvement and management of the revenue, and for the support of public credit, the undersigned feels it his duty to accom-

pany it with a frank expression of his opinions.

The act of Congress to establish the Treasury Department makes it the duty of the Secretary of the Treasury to digest and prepare plans for the support of public credit, and for the improvement and management of the revenue. The duties enjoined, as well by this act as by the subsequent one of the 10th of May, 1800, requiring the Secretary "to digest, prepare, and lay before Congress, at the commencement of every session, a report on the subject of finance, containing estimates of the public revenue and public expenditures, and plans for improving or increasing the revenues from time to time, for the purpose of giving information to Congress, in adopting modes for raising the money requisite to meet the public expenditures," have been supposed to include not merely the application of the resources of the Government, but the whole subject of the currency, and the means of preserving its soundness.

On this supposition, the first Secretary of the Treasury, in his memorable reports of January and December, 1790, recommended a national bank as "an institution of primary importance to the finances, and of the greatest utility in the operations connected with the support of public credit;" and various communications since made to Congress show that the same views were entertained of their duties by others who have succeeded him in the

Department.

The performance of the duties thus enjoined by law upon the Secretary of the Treasury implies, however, no commitment of any other department of the Government, each being left free to act according to the mode pointed out by the Constitution.

The important charge confided to the Treasury Department, and on which

the operations of the Government essentially depend, in the improvement and management of the revenue and the support of public credit, and of transferring the public funds to all parts of the United States, imperiously requires from the Government all the facilities which it may constitutionally provide for those objects, and especially for regulating and preserving a

sound carrency.

As early as May, 1781, the Congress of the United States, convened under the articles of confederation, approved the plan of a national bank submitted to their consideration by Mr. Morris, then superintendent of the finances, and, on the 31st of December, of the same year, "from a conviction of the support which the finances of the United States would receive from the establishment of a national bank," passed an ordinance, incorporating such an institution, under the name and style of "The President, Directors, and Company of the Bank of North America." The aid afforded by that institution was acknowledged to have been of essential consequence during the remaining period of the war, and its utility subsequent to the

peace of little less importance.

The authority of the present Government to create an institution for the same purposes cannot be less clear. It has, moreover, the sanction of the executive, legislative, and judicial authorities, and of a majority of the people of the United States, from the organization of the Government to the present time. If public opinion cannot be considered the infallible expounder, it is among the soundest commentators of the Constitution. It is undoubtedly the wisest guide and only effective check to those to whom the administration of the Constitution is confided; and it is believed, that, in free and enlightened States, the harmony not less than the welfare of the community is best promoted by receiving as settled those great questions of public policy in which the constituted authorities have long concurred, and in which they have been sustained by the unequivocal expression of the will of the people.

The indispensable necessity of such an institution for the fiscal operations of the Government in all its departments, for the regulation and preservation of a sound currency, for the aid of commercial transactions generally, and even for the safety and utility of the local banks, is not doubted, and, as is believed, has been shown in the past experience of the Government, and

in the general accommodation and operations of the present bank.

The present institution may indeed be considered as peculiarly the offspring of that necessity, springing from the inconveniences which followed
the loss of the first Bank of the United States, and the evils and distresses
incident to the excessive, and, in some instances, fraudulent issues of the
local banks during the war. The propriety of continuing it, is to be considered not more in reference to the expediency of banking generally, than
in regard to the actual state of things, and to the multiplicity of State banks
already in existence, and which can neither be displaced, nor in other manner controlled in their issues of paper by the General Government. This
is an evil not to be submitted to; and the remedy at present applied, while
it preserves a sound currency for the country at large, promotes the real interests of the local banks, by giving soundness to their paper.

If the necessity of a banking institution be conceded or shown, that which shall judiciously combine the power of the Government with private enterprise is believed to be most efficacious. The Government would thus obtain the benefit of individual sagacity in the general management of the Bank,

2

and, by means of its deposites and share in the direction; possess the neces-

sary power for the prevention of abuse.

It is not intended to assert that the Bank of the United States, as at present organized, is perfect, or that the essential objects of such an institution might not be attained by means of an entirely new one, organized upon proper principles, and with salutary limitations. It must be admitted, however, that the good management of the present bank, the accommodation it has given the Government, and the practical benefits it has rendered the community, whether it may or may not have accomplished all that was expected from it, and the advantages of its present condition, are circumstances in its favor, entitled to great weight, and give it strong claims upon the consideration of Congress in any future legislation upon the subject.

To these may be added the knowledge the present bank has acquired of the business and wants of the various portions of this extensive country, which, being the result of time and experience, is an advantage it must ne-

cessarily possess over any new institution.

It is to be observed, moreover, that the facilities of capital actually afforded by the present institution to the agricultural, confinercial, and manufacturing industry of all parts of the Union, could not be withdrawn, even by transferring them to another institution, without a severe shock to each of those interests, and to the relations of society generally.

To similar considerations, it may be presumed, is to be traced the uniform policy of the several States of the Union, of rechartering their local institutions with such modifications as experience may have dictated, in prefer-

ence to creating new ones.

Should any objection be felt or entertained on the score of monopoly, it might be obviated by placing, through the means of a sufficient premium, the present institution upon the footing of a new one, and guarding its future operations by such judicious checks and limitations as experience may have

shown to be necessary.

These considerations, and others which will be adverted to in a subsequent part of this report, the experience of the Department in the trying periods of its history, and the convictions of his own judgment, concurring with those of the eminent men who have preceded the undersigned in its administration, induce him to recommend the expediency of rechartering the present bank at the proper time, and with such modifications, as, with out impairing its usefulness to the Government and the community, may be calculated to recommend it to the approbation of the Executive, and, what is vitally important, to the confidence of the people.

Should Congress deem it expedient to authorize the sale of the bank shares for a sum not less than eight millions of dollars, the reimbursement of the public debt on or before the 3d of March, 1833, may be confidently anticipated; and from that period the amount of revenue applicable to that

object will be no longer required.

The revision and alteration in the existing duties, which will be called for by this state of things, cannot too early engage the attention of Congress. The information requisite to the establishment of a scale of duties upon a permanent and satisfactory basis, will require time; and a system, in which so many important interests are involved, will be better subserved by prospective legislation than by sudden changes.

The revenue derived from the present duties cannot be safely dispensed with before the period assigned for the extinguishment of the public debt;

but such revised, system as Congress may in its wisdom previously provide, may with entire propriety be authorized to take effect from and after the 3d of March, 1833.

Independently of the charge for the public debt, the revenue for the expenditures of the Government, as at present authorized, need not, it is esti-

mated, exceed annually the sum of \$13,500,000.

It is believed, however, that there are other objects of expenditure of obvious expediency, if not of indispensable necessity, which it may be supposed have been postponed by the higher obligation of paying the public debt. The present occasion is deemed propitious to provide for those objects in a manner to advance the glory and prosperity of the country with-

out inconvenience to the people.

It is therefore respectfully recommended, that, in addition to the expenditure as at present authorized, appropriations may, at the proper time, be provided for the following objects: for augmenting the naval and military resources; extending the armories; arming the militua of the several States; increasing the pay and emoluments of the navy officers to an equality with those of the army; and providing them with the means of nautical instruction; enlarging the navy hospital fund; strengthening the frontier defences; removing obstructions from the western waters; for making accurate and complete surveys of the coast, and for improving the coast and harbors of the Union, so as to afford greater facilities to the commerce and navigation of the United States. The occasion would also be a favorable one for constructing custom-houses and warehouses in the principal commercial cities, in some of which they are indispensably necessary for the purposes of the revenue; and likewise for providing for the proper permanent accommodation of the courts of the United States and their officers.

In many districts, the compensation of the officers of the customs, in the present state of commerce, is insufficient for their support, and inadequate to their services. As a part of the general system, however, and effectually to guard the revenue, the services of such officers are necessary, without regard to the amount of business; and it is believed expedient to make their allowance commensurate with the vigilance required, and the duties to be performed. A further improvement may be made in the mode of compensating the officers of the customs, by substituting salaries for fees in all the collection districts, by which, at a comparatively small expense to the Treasury, commerce and navigation would be relieved from burdens always in-

convenient, if not oppressive,

It is believed that the public property and offices at the seat of Government require improvement and extension, and that further appropriations might be made to adapt them to the increasing business of the country.

The salaries of the public ministers abroad must be acknowledged to be utterly inadequate, either for the dignity of the office, or the necessary comfort of their families. At some foreign courts, and those whose relations towards the United States are the most important, the expenses incident to the station are found so burdensome as only to be met by the private resources of the minister. The tendency of this is to throw those high trusts altogether into the hands of the rich, which is certainly not according to the genius of our system. Such a provision for public ministers as would obviate these evils, and enable the minister to perform the common duties of hospitality to his countrymen, and promote social intercourse between the citizens of both nations, would not only elevate the character of his country, but essentially improve its public relations.

In addition to these objects, further provision may be made for those officers and soldiers of the revolution who are yet spared as monuments of that patriotism and self-devotion, to which, under Providence, we owe our multi-

plied blessings.

For the foregoing purposes, together with the existing expenditure, and a moderate allowance for such objects of general improvement as shall be of an acknowledged national character, within the limits, as admitted by the Executive, of the powers of Congress over the subject, an annual revenue of \$15,000,000 will be fully adequate. It is worthy of remark, that such an amount of revenue would scarcely exceed one dollar on each individual of our population, as it may be reasonably computed when the reduced duties shall take effect, and that the individual burden would continue to diminish with the increase of population and of the national resources.

The sources from which the revenue has hitherto been derived are the imports, public lands, and bank dividends. With the sale of the bank stock, the latter will cease; and as the imports, according to any scale of duties which it will be expedient and practicable to adopt, will be amply sufficient to meet all the expenditure, that portion of the revenue heretofore drawn from the sale of the public lands may be dispensed with, should Congress

see fit to do so.

On this point, the undersigned deems it proper to observe, that the creation of numerous States throughout the western country, now forming a most important part of the Union, and the relative powers claimed and exercised by Congress and the respective States over the public lands, have been gradually accumulating causes of inquietude and difficulty, if not of complaint. It may well deserve consideration, therefore, whether, at a period demanding the amicable and permanent adjustment of the various subjects which now agitate the public mind, these may not be advantageously disposed of, in common with the others, and upon principles just and satisfactory to all parts of the Union.

It must be admitted that the public lands were ceded by the States, or subsequently acquired by the United States, for the common benefit; and that each State has an interest in their proceeds, of which it cannot be justly deprived. Over this part of the public property, the powers of the General Government have been uniformly supposed to have a peculiarly extensive scope, and have been construed to authorize their application to purposes of education and improvement to which other branches of revenue were not deemed applicable. It is not practicable to keep the public lands out of the market; and the present mode of disposing of them is not the most profitable, either to the General Government or to the States, and must be expected, when the proceeds shall be no longer required for the public debt, to give rise to new and more serious objections.

Under these circumstances, it is submitted to the wisdom of Congress to decide upon the propriety of disposing of all the public lands, in the aggregate, to those States within whose territorial limits they lie, at a fair price, to be settled in such manner as might be satisfactory to all. The aggregate price of the whole may then be apportioned among the several States of the Union, according to such equitable ratio as may be consistent with the objects of the original cession, and the proportion of each may be paid or secured directly to the others by the respective States purchasing the land. All cause of difficulty with the General Government on this subject would then be removed; and no doubt can be entertained, that, by means of stock

issued by the buying States, bearing a moderate interest, and which, in consequence of the reimbursement of the public debt, would require a great value, they would be able at once to pay the amount upon advantageous terms. It may not be unreasonable also to expect that the obligation to pay the annual interest upon the stock thus created would diminish the motive for selling the lands at prices calculated to impair the general value of that kind of property.

It is believed, moreover, that the interests of the several States would be better promoted by such a disposition of the public domain, than by sales in the mode hitherto adopted; and it would at once place at the disposal of all the States of the Union, upon fair terms, a fund for purposes of education and improvement, of inestimable benefit to the future prosperity of the na-

tion.

Should Congress deem it proper to dispense with the public lands as a source of revenue, the amount to be raised from imports after the 3d of March, 1833, according to the foregoing estimate, will be \$15,000,000; but, with a reliance upon the public lands, as heretofore, it may be estimated at \$12,000,000, to which, as the case may be, it will be necessary to

adopt the provision for the future.

Whatever room there may be for diversity of opinion with respect to the expediency of distributing among the several States any surplus revenue that may casually accrue, it is not doubted that any scheme for encouraging a surplus for distribution, or for any purpose which should make it necessary, will be generally discountenanced. There is too much reason to apprehend that a regular, uniform dependence of the State Governments upon the revenue of the General Government, or an uniform expectation from the same source, would create too great an intentive to high and unequal duties, and not merely disturb the harmony of the Union, but ultimately undermine and subvert the purity and independence of the State sovereignties.

The public welfare and the stability of the Union would be more effectually promoted, by leaving all that is not necessary to a liberal public expenditure with the people themselves. Their affection for the Government would be thereby strengthened, and the sources of individual and national wealth augmented; so that when the Government should have cause to increase its expenditure for public emergencies, it might rely upon a people able and willing to answer the call. While these means of the national wealth are thus cherished, the machinery by which duties upon imports are collected and brought into the public Treasury, may be kept in full operation, and susceptible of greater efficiency whenever the exigency may make it necessary.

It is respectfully suggested that these considerations, and others that will readily present themselves, point out the duties on imports as the best source of revenue, and peculiarly recommend that these duties should be adapted

to the actual expenditure of the Government.

The propriety of reasonably protecting the domestic industry is fully conceded; but it is believed it would neither require nor justify the raising of a larger amount of revenue than may be necessary to defray the expenses of the Government. Some of the evils of a surplus which an excess of revenue beyond the expenditure would necessarily induce, have been already noticed. To these may be added the effect upon the peace and harmony of the country, and upon the safety of the Union, which should certainly not be hazarded for any object not of vital importance to its welfare.

If it could be shown that the labor and capital of the United States re-

quired greater aid to shield them from the injurious regulations of foreign States, sound policy would rather recommend a system of bounties, by which the duties collected from imports might be directly applied to the objects to be cherished, than the accumulation of money in the Treasury. No such necessity, however, is supposed to exist.

The amount of revenue equal to the authorized expenditures of the Government, it is the constitutional duty of Congress to provide; and to a tariff framed for this effect, it is not perceived there can be any reasonable objection. Of this duty, the Constitution itself precludes all doubt, by authoriz-

ing both the expenditure and the means of defraying it,

It will be difficult precisely to graduate the revenue to the expenditure. The necessity of avoiding the possibility of a deficiency in the revenue, and the perpetual fluctuation in the demand and supply, render such a task almost impracticable. An excess of revenue, therefore, under any prudent system of duties may be for a time unavoidable; but this can be better ascertained by experience, and the evil obviated, either by enlarging the expenditure for the public purpose, or by reducing the duties on such artcles as the condition of the country would best admit.

In providing a revenue upon this principle, and for those purposes, the attention of Congress will be necessarily directed to the articles of imports from which the duties should be collected; and this is a question of expediency merely, to be decided with a just regard to all the great interests in-

volved in the subject.

To distribute the duties in such a manner, as far as that may be practicable, as to encourage and protect the labor of the people of the United States from the advantages of superior skill and capital, and the rival preferences of foreign countries, to cherish and preserve those manufactures which have grown up under our own legislation, which contribute to the national wealth, and are essential to our independence and safety, to the defence of the country, the supply of its necessary wants, and to the general prosperity, is considered to be an indispensable duty. The vast amount of property employed in the northern, western, and middle portions of the Union, upon the faith of our own system of laws, and in which the interests of every branch of our industry are involved, could not be immediately abandoned without the most ruinous consequences.

The various opinions by which the people of the United States are divided upon this subject, concern the peace and harmony of the country, and recommend an adjustment on practical principles, rather than with refer-

ence to any abstract doctrines of political economy.

The proposed action of Congress will not be directed to introduce or countenance for the first time the adaptation of duties for revenue to the protection of American labor and capital. The origin of that lies at the foundation of the Government; and, taking root in the act of July, 1789, it has since increased and spread over our whole legislation, has quickened each branch of industry, and affected most of the important relations of the community. That it may have gone beyond the proper standard, and that the present crisis requires that it should be confined within reasonable limits, will not be denied. It ought to be remarked, however, that the amount of the revenue has not at any time exceeded the authorized objects of expenditure; and that, in preserving such an equality in future, justice to every portion of the community requires that it should be accomplished without uprooting those great interests which have been providently planted and carefully nourished.

It the amount of expenditure be regulated by an enlightened economy, and the aggregate of duries levied on imports be neither extravagant nor oppressive to the consumer, it is deemed to be comparatively unimportant whether it be collected from many or few articles of importation. It could only become material by causing the duties to bear unequally upon particular classes. It might not be practicable, however, in such a community as ours; and in distributing the duties with any reference whatever to the protection of labor, altogether to avoid that inconvenience, so much of the inconvenience as may be unavoidable might be temporarily submitted to, for the sake of the national advantages it would ultimately confer. It may be expected, also, that the poorer classes, so far as any such inequality would affect them, will be generally indemnified by the increased activity given to profitable modes of employment.

Happily for the United States, the sum to which it is now proposed to limit the revenue is not likely to be oppressive on any class, even according to the present numbers of the American population. It is also to be observed, that relatively, both to population and the means of consumption, it would annually diminish; while the cheapening of transportation, by the means of the rapidly increasing facilities of intercourse, would constantly

tend to equalize prices, and diffuse the benefits of labor.

The objects more particularly requiring the aid of the existing duties upon the principles of this report, are believed to be wool, woollens, cottons, iron, hemp, and sugar, as comprehending those articles in which the agricultural and manufacturing industry are more particularly interested.

Upon these articles, the average duty collected in the years 1829 and

1830 amounted to \$8,940,393, as is shown by the annexed statement.

These duties could not be materially changed at present, without the effect already deprecated. No objection is perceived, however, to such gradual reduction of them in future as may withdraw the aid thus afforded, as the growth and stability of our manufactures will enable them to dispense with it, to such a degree at least as will, with the aid of an increase of population and the means of consumption, still leave a revenue adequate to the expenditures, or until what may be withdrawn from them may be levied

on other articles which may be found to admit of it.

The additional sum, which, together with the amount of those duties, it may be necessary for Congress to provide in a re-adjustment of the tariff, will depend upon its decision as to confining the expenditures to the present objects, or of enlarging them as herein suggested. In the former case, the sum of \$4,559,607, and, in the latter, the sum of \$6,059,607, will be required; and, in regard to either estimate, the provision should be upon a scale sufficiently liberal to guard against the chance of a deficiency. In providing for either sum, the duties may be advantageously retained upon those articles of luxury, or which are principally consumed by the wealthier classes, or upon those not abundantly produced in the United States, in preference to others. The effect of this would be to countervail to the poorer classes, by cheapening their general supply, the higher duties on other articles. At the same time the duties may be removed from such raw materials as will admit of it without detriment to our agriculture; whereby the manufacturers would be enabled to sell cheaper, and, also, the sooner to dispense with a part of the duties which may be at present retained for their protection. Any amount of duty upon a raw material is, to its extent, an injury to the manufacturer, requiring further countervailing protection against our own rather than foreign regulations, and is only to be justified by the paramount interests of agriculture. In that case, it would deserve consideration whether the encouragement of an object of agriculture might not be more properly reconciled with the encouragement of the manufacture, and with greater equality as regards other interests, by bounties rather than by a duty on the raw material.

While presenting these views, the burdens to which the interests of navigation have been subjected by the existing duties on articles necessary in shipbuilding, have not been overlooked; and, while equitably adjusting other interests, this may require from the Legislature particular attention; The great importance, both of our foreign and coasting navigation to the country, and especially to those interests now requiring to be cherished, cannot be doubted. In the competition which it is obliged to maintain with the commerce of the world, every where the object of peculiar aid, it would seem to demand of the Government a liberal support. It is believed that the expenses of building and fitting out vessels of every description, including steamboats, are injuriously increased by the present duties, and that a drawback of a large portion, if not the whole of the duty on all the articles composed of iron, hemp, flax, or copper, whether of foreign or domestic production, used in their construction or equipment, might be authorized, under proper safeguards, with obvious advantage to other interests, and without material detriment to the revenue.

It is hoped, however, that these suggestions will be received as proceeding from a sense of official duty, and intended to invite the attention of Congress to the various modes of revising the existing scale of duties, from which a selection may be more judiciously made with the aid of greater information than is at present in possession of the Department, rather than to pre-

sent a digested scheme for the future revenue.

The undersigned is not insensible to the embarrassments attending such a subject, both from its delicacy and complexity; and the difficulties of reconciling any system of duties, in the present condition of the public mind, with the interests and views of all, are fully appreciated. These can be surmounted only by the wisdom and patriotism of the people and of Congress. He cannot doubt, however, that it will be the wish of all earnestly to endeavor to surmount them; and he confides in the forbearance and liberality of an enlightened public to accomplish the task. He respectfully suggests that the subject is to be dealt with in the spirit of a liberal compromise, in which, for the sake of the general harmony, each conflicting interest should be expected to yield a part for the common benefit of all.

The diversity of interests which characterise different portions of the Union, arising from geographical position and peculiarity of habits and pursuits, does not admit of that degree of favor to any particular interest, which, in other countries differently situated, may be safely and wisely granted. The industry of each portion of the Union should be equally regarded and gradually fostered; by which means, each would as certainly, though more slowly, attain maturity, without the sid of measures dangerous to the general

peace and harmony.

Similar considerations prevailed in the formation of the Constitution; and, at that period, the difficulty of drawing with precision the line between rights surrendered and those reserved, at all times great, was increased by a difference among the several States as to their situation, extent, habits, and particular interests. In harmonizing these various objects, and conducting

them to practical results, the framers of that instrument kept steadily in view "the consolidation of the Union, and the general prosperity of the whole." By merging in these all objects of inferior magnitude, the Constitution came from their hands "the result of a spirit of amity, and of that mutual deference and concession which the peculiarity of our political situation render edindispensable." "The full and entire approbation of every State was not counted upon; but it was hoped that each would consider that had her interests been alone consulted, the consequences might have been particularly disagreeable or injurious."

In the Government thus formed, were fully and effectually vested the power of making war, peace, and treaties, that of levying money and regulating commerce, and the corresponding judicial and executive powers of

expounding and executing the whole.

Upon no other principles, and in no other spirit, can the Constitution be administered with safety to the Union. The force of the Government is a moral force, resting upon the sound action of the public opinion throughout the various portions of the country. Due respect for the rights and duties of the States, and a mild, equal, and moderate exercise of those confided to the General Government, with a ready deference to the will of the people, are believed to constitute the soundest policy, and to furnish the best safe-

guards.

The observance of this policy is the duty of the Government, and a patriotic acquiescence in measures calculated to effect it, though they may occasionally act with some inequality, is not less the duty of the people. Considerations of power are not alone involved either in measures or opinions affecting the interests and harmony of the community; and no measures can or ought long to prevail, without a broad and general support from public opinion. The obligation of laws constitutionally enacted by the proper authorities, is not to be questioned; but extreme measures, adopted by slender majorities, and obnoxious to the interests and opinions of minorities. powerful in numbers, wealth, and intelligence, cannot be persevered in without danger to the general harmony, and without undermining the moral power, not merely of the executive and legislative departments, but also that of the judiciary, which may be called to sustain the authority, without the option of deciding upon the expediency of the measure. In our system each side has important rights; and those of the minority consist in requiring that the power of the majority be exerted with a just regard to their interests, both of person and property. Without a reasonable descrence and concession, both as to measures and opinions, the great objects of the Government cannot be attained; and, while it is conceded that it would be improper to push measures for the protection of the labor or improvement of the country to an extreme or oppressive degree, it must also be admitted that it would not be less so altogether to deny to the General Government the moderate exercise of powers for those objects for which it is believed mainly to have been instituted.

The real strength of the Government depends not more upon a harmonious action of its various parts, than in producing the same effect upon the

various interests over which it acts.

Considering the amount of labor and capital employed in manufactures of the greatest importance to the country, and which have already contributed so essentially to our defence and safety, and to the general prosperity, it could not be expected that they should be suddenly abandoned. Regard

ing, at the same time, the diversity of interests resulting from the peculiar situation of the United States, the manufacturing interest itself should be 'content with a moderate and gradual protection, rather than by extreme measures to entlanger the public tranquillity. The indispensable necessity of the aid of the General Government for those objects of acknowledged national concern, more especially the improvement of the rivers and harbors which are the great highway of the people, and to which the means of the several States are both inadequate and inapplicable, could not be withheld without opposition to the opinions of a majority of the people, and the interests of many portions of the Union. It is, at the same time, admitted, that this aid should be moderately conferred, and with proper deference to opinions of an opposite character. And it cannot be doubted that too extensive an exercise of the powers of the General Government over these objects would ultimately subvert the constitutional sovereignty of the States. It must be acknowledged that the just medium on all these subjects is difficult of attainment; but in the desire to seek, and in the sagacity to adopt the best, consists the true policy of an American statesman.

If the adjustment suggested to Congress by the views hazarded in this report be in any wise entitled to their respect; it is not unreasonable to hope that the various topics of national concern at present engaging the attention of the people may facilitate rather than embarrass the task. The interests of agriculture, commerce, and manufactures, and the final disposition of the public lands, are the prominent, and necessary, and immediate objects of public policy. As incident, however, and indeed necessary, to the security and prosperity of these great interests, the preservation of a sound currency cannot escape attention. On the soundness and steadiness of this indispensable medium of exchange depend the value and stability of every description of property, not less than the activity of every branch of business; and it is not to be doubted that the commercial and manufacturing industry would be most severely and immediately affected by any derangement of this spring

of their prosperity.

The measures of the General Government in respect to the tariff, to objects of public improvement, to the public lands, and to the Bank of the United States, are the sources of the existing solicitude throughout the country. For the permanent adjustment of all, in a manner to promote the harmony of all parts of the Union, and clevate the moral character of the country, the wisdom and patriotism of the Government and of the people can

arone le looked to.

Independently of the considerations connected with the currency, the interests both of the Government and individuals involved in the Bank of the United States make the stability of that institution an object of great importance. No reason is perceived why this great interest should not be equally considered in the scheme of deference, and concession, and compromise, which the public safety, not less than the national prosperity, so urgently recommends. While conflicting interests and opinions on other subjects are invited to meet on middle ground, and, on the altar of common good, each to offer something for the preservation of concord and union broughout this favored land, the advocates and opposers of the existing system for regulating the currency may also be expected to join in the same patriotic sacrifice.

It is not perceived that any other satisfactory basis for a scheme of general njustment can be devised; than that which shall pay a just regard to

the interests of all, and observe a proper deference to the public will. On this ground mainly, one portion of the agricultural interest has been invited, to agonymodate opinions conscientiously formed and ardently advocated to opposite opinions more successfully maintained by other and more powerful interests. The invitation could not be more appropriately recommended, than by affording an example in other cases founded upon the same principle. Acquiescence in the public will is not less the duty of Government than of the people themselves. The utmost respect is felt for an independent exercise of conscientious opinions; but, in a country like ours, though a sense of duty authorizes all fair attempts to convince the public mind, it equally dictates a ready acquiescence by all in the public will finally expressed.

In presenting to the view of Congress the means of the Government, the bonds due for duties which are now in suit have been reserved for this place. The amount of bonds remaining in suit since the commencement of the Government may be estimated, on the 30th of September last, at \$6,835,821,63. Of this sum, it is believed that not more than one million of dollars could, under any circumstances, be recovered. The debtors, however, remain legally liable for the whole amount, and, without the hope of ever paying, are thereby kept in a state of poverty and helplessness:

The act passed at the last session of Congress for the relief of certain insolvent debtors, according to the construction which has been given to it, has afforded but little relief to those for whom it was probably intended. It will be the duty of the undersigned, in a subsequent report, in conformity with that law, to lay before Congress the principles and manner of its execution. It may not be out of place, in the mean time, when presenting a general view of the financial means of the Government, to recommend

that no reliance should be placed on these debts.

The punctuality of the American merchant in the payment of duties, in every period of our history, and under the most severe vicissitudes, is deserving of the greatest admiration. Of the whole amount of custom-house bonds falling due in the first three quarters of the present year, only \$46,963 76 have been unpaid. Of seven hundred and eighty one millions of dollars secured for duties from the commencement of the Government to the 30th of September last, the whole loss may be estimated to be less than six millions of dollars. These delinquencies are believed in most, if not in all instances, to have been the result of unavoidable misfortune. involving, in the ruin of the principal, the sureties required by the laws of the United States. In most cases, the United States, by means of the existing priority acts, have obtained the benefit of whatever property the debtors possessed at the time of their insolvency. In many instances, their general creditors have either released; or would be willing to release them, if the claim of the Government did not render such an act of liberality unavailing. By this means, a large number of our fellow-citizens, of fair character and intelligence, and qualified by their exertions to promote the prosperity of the country, are paralyzed in their industry, and deprived of the means of providing for their families, and contributing to the general stock of labor. It is respectfully submitted to the wisdom and generosity of Congress, whether the occasion of extinguishing the national debt, and relieving the burdens of the community at large, and where the greatest amount likely to be recovered is not required for the public exigencies, is not also propitious for giving absolute relief to those enterprising men, who,

in times of difficulty and need, contributed to enrich the public treasury. The period of the total extinguishment of the national debt will be a period of national rejoicing, and might be properly signalized by such an act of

grace to this unfortunate class of our countrymen.

Should Congress, however, desire to compel the payment of any portion of these debts, or to discriminate among the objects of its elemency, it is believed that a law of greater scope than the present, authorizing an inquiry into the facts, and a discharge of the debtor where there is no fraud, with or without payment of any particular amount, and returning to each debtor a reasonable per centage of the sum paid, is recommended as expedient and necessary.

The Secretary of the Treasury also transmits a report from the Commissioner of the General Land Office, showing the state of the affairs of that

the first of the second of the

branch of the Department.

All which is respectfully submitted.

LOUIS M'LANE, Secretary of the Treasury.

TREASURY DEPARTMENT,

December 7, 1831.

A STATEMENT exhibiting the duties which accrued on merchandise, tonnage, passports, and clearances; of debentures issued on the exportation of foreign merchandise; drawback on domestic refined sugar, and domestic distilled tures issued on the exportation of fish exported; allowances to vessels employed in the fisheries; and of expenses of spirits exported; bounty on satted fish exported; allowances to vessels employed in the fisheries; and of expenses of collection during the year ending on the 31st of December, 1830.

STATE SEATON SMILE CONTROL

REPORT OF THE COMMISSIONER OF THE GENERAL LAND OFFICE.

GENERAL LAND OFFICE,

November 30, 1831.

Sin: The operations of this office for the last year, a report of which I have now the honor of presenting to your consideration and that of the Government, have greatly exceeded previous expectations. An unusual quantity of the public lands has been disposed of; nearly all of which at the minimum price, and to actual settlers. The causes which have principally contributed to increase the sales, may be found in that active spirit of engineering which prevails in both Europe and America, in the enterprise and industry of the people of the west and southwestern States and Terri-

tories, and in the general prosperity of the country.

2,638,02A

The statement hereunto annexed, marked A, shows the periods to which the quarterly accounts of the receivers have been rendered to this office, as also the monthly abstracts of sales and receipts, and the admitted balances remaining in the hands of the several receivers at the respective dates of their last returns. The quantity of lands sold, and the amount of purchase money, designating that portion received for sales made prior to July 1st, 1820; the several amounts received in cash, forfeited land scrip, military land scrip, and the total amount of receipts; with the amount paid into the Treasury, in each State and Territory, during the year 1830, the first and second quarters of 1831, as also the third quarter of 1831; will appear from the accompanying document, marked B. The annexed statement, marked C. exhibits the transactions under the operation of the act of Congress, approved the 31st of March, 1830, entitled "An act for the relief of the purchasers of public lands, and for the suppression of fraudulent practices at the sales of the public lands of the United States," and the act supplemental thereto, of the 25th of February, 1831, both of which terminated on the 4th day of July last.

In the last annual report of this office, a schedule was furnished, showing the quantity of forfeited land stock issued at the several land offices established under the credit system, amounting, up to June 30th, 1830, to \$365,035 32. The amount issued since that period, to the 30th September last, is \$171,977 49, making a total amount issued at the land offices, up to the last named period, of \$537,012 81; which, added to \$29,782 75, the amount issued at the Treasury for lands sold to Edgar and Macomb at New York, in the year 1787, constitutes an aggregate of forfeited land

stock issued to the 30th of September, 1831, of \$566,795 56.

The appropriations for clerk hire, in the several offices of the surveyors general, with one exception, have, for many years, been inadequate to the due performance of all the duties required of them by law. Arrears in recording the public surveys in most of the offices have long been accumulating, and been the cause of much delay and embarrassment in this branch of the public service. The present means provided by Congress have

proved insufficient to enable the surveyors general to discharge their current duties, and examine and test the accuracy of the surveys, and prepare the duplicate plats and descriptive notes, according to law, in time for the Government to bring the lands into market within a reasonable period after the surveys have been completed. Many contemplated sales have been postponed during the present year, and the intentions of the Government defeated, and the expectations of the people disappointed, by reason of the insufficiency of the necessary aid in the surveyors' offices. The returns of the public surveys should be examined, and their accuracy tested at the surveyor's office, as soon as practicable after they are received, in order to the prompt settlement of the accounts of deputies, and to the immediate detection of those errors which must be corrected previous to such settlement. It is of much importance, both to the surveyors and the public service, that the duplicate plats be promptly prepared, and furnished to the district land offices, and to this office, as the surveyor general is not credited with the expenditures charged in the accounts, until the plats of surveys are rendered, and his vouchers compared therewith; nor can the lands be proclaimed for sale by the President, until the receipt of such plats at the General Land Office. At the present time, there are due from the several surveyors' office the returns of at least three hundred townships surveyed. which have been detained, and the adjustment of the accounts for which is suspended, by reason of the cause above mentioned; which townships ought to have been prepared and offered for public sale, and made subject to private entry, during the present year. To remedy these evils, and to prevent future delays of like character, it is respectfully submitted to the wis dom of Congress to make such additional appropriations for the surveyors offices, as will prove adequate to the performance of all their duties.

From such causes and embarrassments, I regret that I am unable to present such a report of the operations of the surveying department as could be desired, and as the public interest requires. The protracted illness of the surveyors general of Florida, of Mississippi, and of Missouri, Illinois, and Arkansas, should be added to the other causes of delay in preparing such public lands for market as had been previously surveyed in their respective districts; while the difficulty of procuring, until late in the season, a compatent surveyor general for Louisiana, under the act of the last session of Congress, who would accept that office, has caused an entire suspen-

sion of the surveys in that State.

On the establishment of the office of surveyor general for Louisiana, with a knowledge of the confusion and chaos which for a long time had prevailed in the surveyor's office south of Tennessee, it was deemed expedient and necessary to send a special agent to that section of country, who was intimately acquainted with the subject, and with the numerous errors, and their character, which had been committed, in relation to the surveys of the private land claims, with a view to expedite the transfer of the proper surveys from said office to that of Louisiana, as required by the act of March last, and to examine the surveys, documents, and papers, and take abstracts and memorandums of such of them as it was necessary should be thus transferred. That agent has returned, after a very faithful performance of the duty assigned him; and, from ha full and intelligent report, I am satisfied that the impolitic and irresponsible system which existed in the surveying department, under the laws creating the offices-of principal deputy surveyors, which were repealed at the last session of Congress,) has introduced evils.

difficulties, and embarrassments, connected with the public surveys is Louisiana, which cannot be overcome but by the patient industry, unceasing vigilance, and competent skill, of the surveyor general of that State. While it is the policy, as it is the interest of the Government, to facilitate the sales of the public lands, and accommodate purchasers, and promote the settlement of those sections of the country to which emigration tends, I would renew the recommendation for establishing another land office in Indiana, as called for by the necessities and convenience of actual settlers, and as required by considerations equally important to the pecuniary interests of the Government; to include the territory described in the following limits, to wit: Commencing at that point on the Tippecanoe river where the boundary line established by the treaty of the Wabash, the 16th of October, 1826, intersects that river; thence, with said boundary, to its intersection with the range line dividing ranges seven and eight east; thence north, to the northern boundary of the State; thence west, with the line of that northern boundary, to the northeast corner of Illinois; thence south, to a point due west of the first call; and thence, due east, to the place of beginning; and that the land office therein be located at some eligible and convenient place by the President. The section of country above described is rapidly setaling with emigrants from other States and from Europe, many of whom are compelled to travel from one hundred to one hundred and eighty miles from their place of residence, to enter and pay for their lands; while others, without the means of defraying the expenses of so long a journey, prefer locating themselves upon the public domain, in the hope that some pre-

The act of 30th May, 1330, "for the relief of certain officers and sol-

diers of the Virginia line and navy, and of the continental army, during the revolutionary war," has thrown upon this office an amount of labor greatly exceeding that which was anticipated. The appropriation of four thousand dollars for this service and other objects of duty, was insufficient to accomplish the purposes intended; and others have been occasionally detailed to assist, to the neglect of current duties. Such were the importumities of the claimants, and so ardent and pressing their demands for scrip, and so numerous the difficulties to be encountered, that, with the most persevering industry, the office, with the means in its power, has not been able to satisfy all the claims under the Virginia continental and State lines. Five hundred and twenty warrants (including two hundred and forty seven of United States' military) have been satisfied with scrip, amounting to 183,690 acres of the Virginia State line and navy, 38,901 30 acres of the Virginia continental line, and 34,300 acres of the United States' military. Many of these warrants, in fact the largest portion of them, with the title papers connected therewith, have required and have received an examination and investigation of as difficult and complicated a character as those of a laborious and contested suit in chancery, involving an extensive and voluminous correspondence of legal discussion, and frequently of perplexing embarrassment. These investigations have imposed upon the commissioner, and those gentlemen of the office who were particularly charged with this service, a very fatiguing and irksome duty. It would have been greatly preferred, if the peculiar circumstances of many of these cases had justified the delay necessary to an adjudication in the regular administration of jus-

tice, that the decision of numerous questions arising under the construction wills, and the conflicting claims of heirs, had not devolved upon an exe-

emption or other relief law will be passed for their benefit.

putive officer, who could not devote that time and consideration to controverted questions of law which their importance frequently required. From the statement marked D, hereunto annexed, it will appear, that, up to the 14th instant, three thousand five hundred and twenty-eight pieces of scrip had been issued, the record of which, in this office, fills eighteen books of

about two hundred pages each.

At the last session of Congress, the sum of five thousand dollars was appropriated for the employment of temporary clerks, to bring up the errears of this office. This sum will have been expended on the first of January next, and has furnished the means of disposing of an unusual amount of the current business for the year. From the first of January last, there have been prepared, examined, and recorded, and will be issued previous to the close of the year, more than twenty-five thousand patents for lands sold; when, with the ordinary force of the office applied to that object, there were less than seven thousand issued in the year 1830. During the same time, there have been written, and recorded or registered, more than five thousand letters, occupying a record exceeding fifteen hundred large folio pages, and five hundred quarto pages, in addition to the performance of other duties which have unremittingly pressed upon the time and attention of the office, But with all the exertions which have been made, and with the aid afforded by the appropriation above mentioned, to such an extent has the current business unexpectedly increased, that the arrears on the first of January next will be greater than at the date of my last report. The annexed document, marked E, exhibits the several classes of arrears, with the number of clerks required to bring up the business of each in one year; by which it will appear that the labor of fifty-five clerks is necessary to accomplish that object. That statement has been made out from a very particular examination, and a careful and moderate estimate of the amount of labor required, without reference to sickness, or necessary or unavoidable absence from duty. But it will be impossible to employ so many additional clerks in the rooms allotted to this office; and there are no unoccupied rooms in the public buildings appropriated to the executive administration of the Government. However desirable, therefore, it may be, on public considerations, to have all the business of the office brought up to the successive periods of its current duties, no practicable plan can be immediately adopted, by which that object can be attained in less time than three or four years. With this view of the subject, I would respectfully recommend the permanent employment of fifteen additional clerks, and a special appropriation of five thousand dollars to defray the expenses of writing and recording patents out of the office in the year 1832. additional assistance, if the ordinary business should not greatly increase, it is believed a considerable portion of the arrears could be brought up in four years; at the expiration of which period, the whole force then in the office would be required to discharge its current duties. With this additional number of permanent clerks, a re-organization of the bureaus of the office, on the plan mentioned in my last report, could be effected to great advantage, and essentially contribute to the accuracy and despatch of business.

The arrears herein referred to, (one item of which will, on the first of January next, consist of more than thirty-five thousand patents for lands sold,) although unavoidable with the means furnished to the office, have created delays in its business, frequently injurious to persons interested, and cometimes to the public service, and have afforded just cause of complaint

from those who were entitled to a prompt discharge of its duties. I make this disclosure, with the hope that ample provision will soon be made to enable the department to do away the cause of complaint which now exists,

and prevent the recurrence of any such cause in future.

By reference to the last annual report of this office, it will be seen that the total amount of sales of the public lands for the year 1829 was 1,244,860 acres; and it was therein estimated that the annual sales to actual settlers, commencing with the year 1831, would amount to one and one-half millions of acres, and that those sales would increase, with the population of the valley of the Mississippi, to fifty per cent. at the close of the next ten years. From the exhibit hereunto annexed, marked B, it appears that the sales for the year 1830 have amounted to more than one million nine hundred thousand, and that for the three first quarters of the present year they have exceeded two millions of acres, and that the money actually paid into the Treasury during the last period, from the proceeds of the sales, is nearly two and one-half millions of dollars.

The importance with which these extensive operations are seen and felt by the people of the western and southwestern States and Territories, imposes upon the Government the highest obligations to promote, by those means within its competency, a prompt discharge of all the duties required of those who have any official agency, either directly or indirectly, in the sales and disposition of the public domain. Those sections of the Union now contain more inhabitants than the entire population of the United States at any period of the revolutionary war. By the returns of the census of 1830, it appears they then contained a free population exceeding three millions, and an aggregate population, within two hundred thousand, equal to all the enumerated inhabitants of the United States and its territories in the year 1790. There are no sections of the Union where the citizens are more distinguished for active and vigorous pursuits and persevering industry, and where they are compelled to rely more exclusively upon their own resources and individual enterprise, for the means of subsistence and the comforts and conveniences of life. The peculiar circumstances which attended their early settlement in the forests, produced habits of the first importance to the rapid growth of the country, and which have subsequently enabled them to contribute largely to the public revenues of the nation. It is over the principal part of those vast regions that the operations of this office extend, and where the titles to real property depend upon the accuracy and fidelity with which its official duties are performed.
